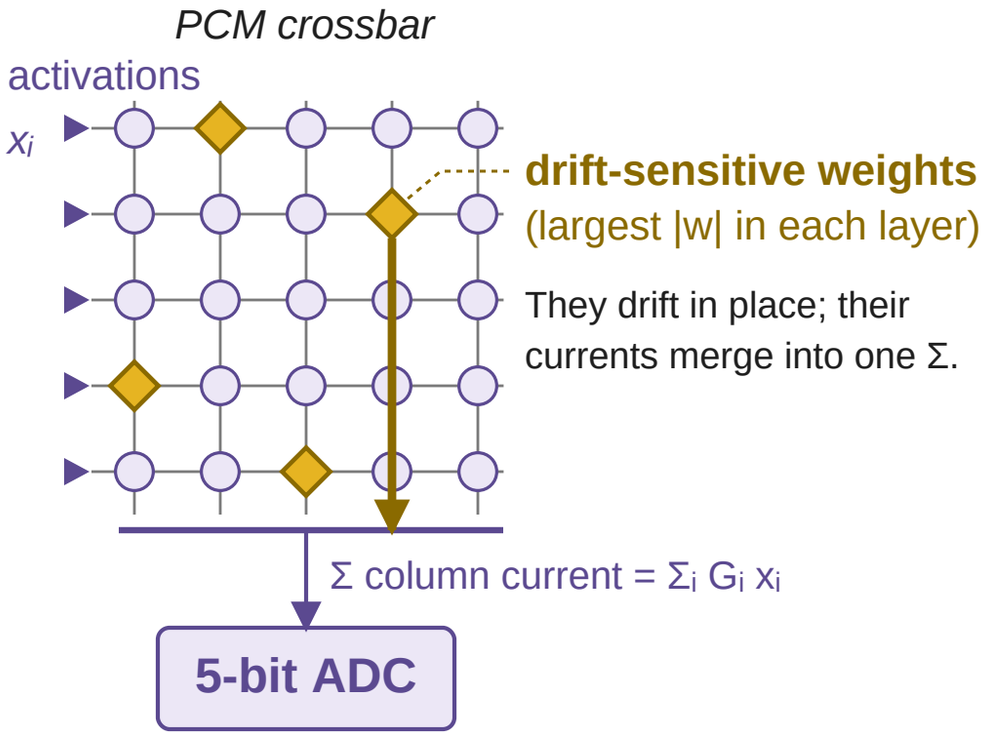
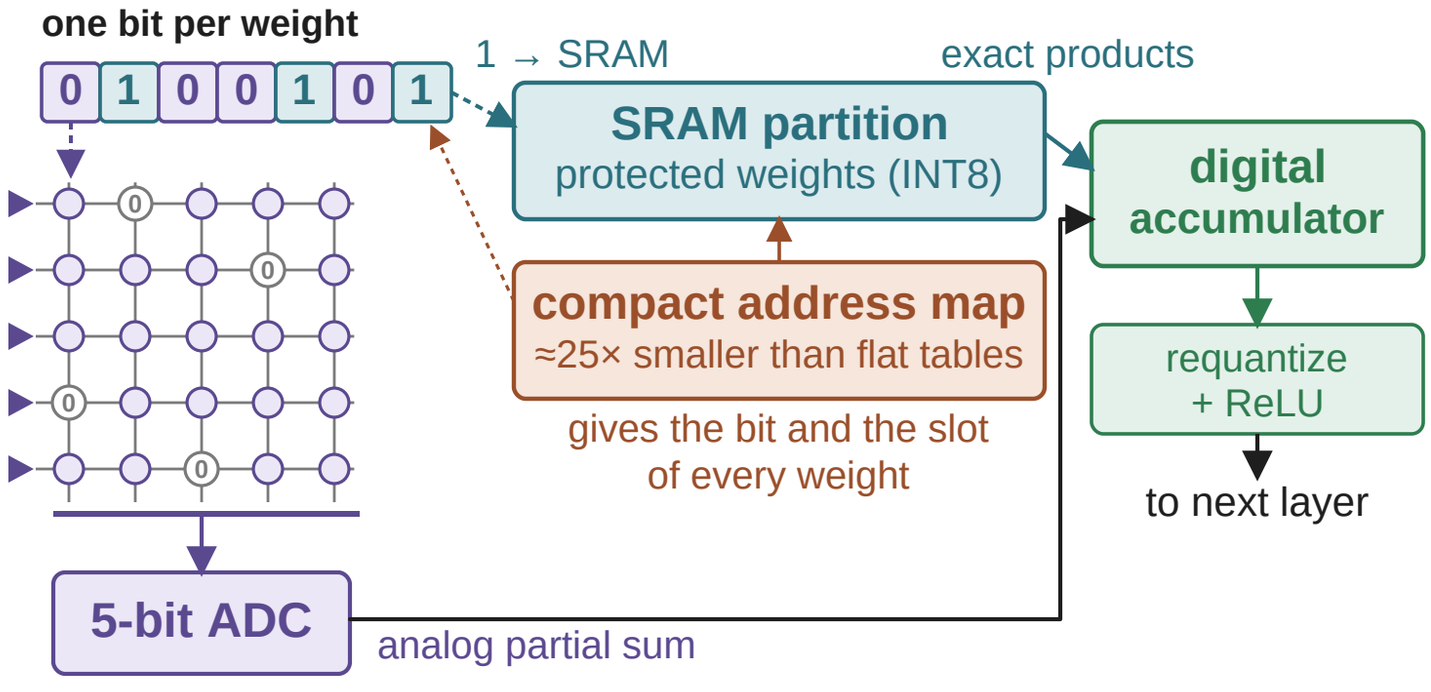
(a) Constraint: a fixed PCM crossbar



A scattered, magnitude-chosen subset cannot be exempted from the collective analog column sum.

(b) Realization without changing the crossbar



Protected weights are vacated to an exact SRAM partition, located by a compact ≈25× map and re-added; the crossbar is unchanged.

PCM cell (analog, drifts)
drift-sensitive weight (to protect)
vacated crossbar position
digital logic
SRAM partition
address map (ROM)
